74AVCH4T245

4-bit dual supply translating transceiver with configurable voltage translation; 3-state

Rev. 01 — 6 August 2009

Product data sheet

1. General description

The 74AVCH4T245 is a 4-bit, dual supply transceiver that enables bidirectional level translation. The device can be used as two 2-bit transceivers or as a 4-bit transceiver. It features two data input-output ports (nAn and nBn), a direction control input (nDIR), a output enable input (\overline{nOE}) and dual supply pins ($V_{CC(A)}$ and $V_{CC(B)}$). Both $V_{CC(A)}$ and $V_{CC(B)}$ can be supplied at any voltage between 0.8 V and 3.6 V making the device suitable for translating between any of the low voltage nodes (0.8 V, 1.2 V, 1.5 V, 1.8 V, 2.5 V and 3.3 V). Pins nAn, \overline{nOE} and nDIR are referenced to $V_{CC(A)}$ and pins nBn are referenced to $V_{CC(B)}$. A HIGH on nDIR allows transmission from nAn to nBn and a LOW on nDIR allows transmission from nBn to nAn. The output enable input (\overline{nOE}) can be used to disable the outputs so the buses are effectively isolated.

The device is fully specified for partial power-down applications using I_{OFF} . The I_{OFF} circuitry disables the output, preventing any damaging backflow current through the device when it is powered down. In suspend mode when either $V_{CC(A)}$ or $V_{CC(B)}$ are at GND level, both A and B outputs are in the high-impedance OFF-state. The bus hold circuitry on the powered-up side always stays active.

The 74AVCH4T245 has active bus hold circuitry which is provided to hold unused or floating data inputs at a valid logic level. This feature eliminates the need for external pull-up or pull-down resistors.

2. Features

- Wide supply voltage range:
 - V_{CC(A)}: 0.8 V to 3.6 V
 - V_{CC(B)}: 0.8 V to 3.6 V
- Complies with JEDEC standards:
 - JESD8-12 (0.8 V to 1.3 V)
 - JESD8-11 (0.9 V to 1.65 V)
 - JESD8-7 (1.2 V to 1.95 V)
 - JESD8-5 (1.8 V to 2.7 V)
 - JESD8-B (2.7 V to 3.6 V)
- ESD protection:
 - HBM JESD22-A114E Class 3B exceeds 8000 V
 - MM JESD22-A115-A exceeds 200 V
 - CDM JESD22-C101C exceeds 1000 V
- Maximum data rates:
 - 380 Mbit/s (\geq 1.8 V to 3.3 V translation)

74AVCH4T245

4-bit dual supply translating transceiver; 3-state

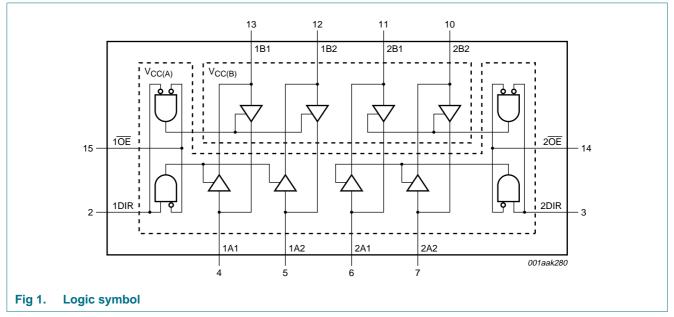

- ◆ 200 Mbit/s (≥ 1.1 V to 3.3 V translation)
- ◆ 200 Mbit/s (≥ 1.1 V to 2.5 V translation)
- ◆ 200 Mbit/s (≥ 1.1 V to 1.8 V translation)
- 150 Mbit/s (\geq 1.1 V to 1.5 V translation)
- 100 Mbit/s (≥ 1.1 V to 1.2 V translation)
- Suspend mode
- Bus hold on data inputs
- Latch-up performance exceeds 100 mA per JESD 78 Class II
- Inputs accept voltages up to 3.6 V
- I_{OFF} circuitry provides partial Power-down mode operation
- Multiple package options
- Specified from -40 °C to +85 °C and -40 °C to +125 °C

3. Ordering information

Table 1.Ordering information

Type number	Package						
	Temperature range	Name	Description	Version			
74AVCH4T245D	–40 °C to +125 °C	SO16	plastic small outline package; 16 leads; body width 3.9 mm	SOT109-1			
74AVCH4T245PW	–40 °C to +125 °C	TSSOP16	plastic thin shrink small outline package; 16 leads; body width 4.4 mm	SOT403-1			
74AVCH4T245BQ	–40 °C to +125 °C	DHVQFN16	plastic dual in-line compatible thermal enhanced very thin quad flat package; no leads; 16 terminals; body $2.5 \times 3.5 \times 0.85$ mm	SOT763-1

74AVCH4T245

4-bit dual supply translating transceiver; 3-state

5.2 Pin description

Table 2.	Pin description	
Symbol	Pin	Description
V _{CC(A)}	1	supply voltage A (nAn, n $\overline{\text{OE}}$ and nDIR inputs are referenced to $V_{\text{CC}(A)}$
1DIR, 2DIR	2, 3	direction control
1A1, 1A2	4, 5	data input or output
2A1, 2A2	6, 7	data input or output
GND ^[1]	8, 9	ground (0 V)
2B2, 2B1	10, 11	data input or output
1B2, 1B1	12, 13	data input or output
$2\overline{OE}, 1\overline{OE}$	14, 15	output enable input (active LOW)
V _{CC(B)}	16	supply voltage B (nBn inputs are referenced to $V_{CC(B)}$)

[1] All GND pins must be connected to ground (0 V).

4-bit dual supply translating transceiver; 3-state

6. Functional description

Table 3. Function table ^[1]								
Supply voltage	Input	Input/output ^[3]						
V _{CC(A)} , V _{CC(B)}	nOE ^[2]	nDIR ^[2]	nAn ^[2]	nBn ^[2]				
0.8 V to 3.6 V	L	L	nAn = nBn	input				
0.8 V to 3.6 V	L	Н	input	nBn = nAn				
0.8 V to 3.6 V	Н	Х	Z	Z				
GND ^[3]	Х	Х	Z	Z				

[1] H = HIGH voltage level; L = LOW voltage level; X = don't care; Z = high-impedance OFF-state.

[2] The nAn, nDIR and n \overline{OE} input circuit is referenced to V_{CC(A)}; The nBn input circuit is referenced to V_{CC(B)}.

[3] If at least one of $V_{CC(A)}$ or $V_{CC(B)}$ is at GND level, the device goes into suspend mode.

7. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134). Voltages are referenced to GND (ground = 0 V).

Symbol	Parameter	Conditions	Min	Max	Unit
V _{CC(A)}	supply voltage A		-0.5	+4.6	V
V _{CC(B)}	supply voltage B		-0.5	+4.6	V
I _{IK}	input clamping current	V _I < 0 V	-50	-	mA
VI	input voltage		<u>[1]</u> –0.5	+4.6	V
I _{OK}	output clamping current	V _O < 0 V	-50	-	mA
Vo	output voltage	Active mode	<u>[1][2][3]</u> –0.5	$V_{CCO} + 0.5$	V
		Suspend or 3-state mode	<u>[1]</u> –0.5	+4.6	V
lo	output current	$V_{O} = 0 V$ to V_{CCO}	[2] _	±50	mA
I _{CC}	supply current	$I_{CC(A)}$ or $I_{CC(B)}$	-	100	mA
I _{GND}	ground current		-100	-	mA
T _{stg}	storage temperature		-65	+150	°C
P _{tot}	total power dissipation	$T_{amb} = -40 \ ^{\circ}C \text{ to } +125 \ ^{\circ}C$	<u>[4]</u> _	500	mW

[1] The minimum input voltage ratings and output voltage ratings may be exceeded if the input and output current ratings are observed.

[2] V_{CCO} is the supply voltage associated with the output port.

[3] V_{CCO} + 0.5 V should not exceed 4.6 V.

[4] For SO16 package: above 70 °C the value of P_{tot} derates linearly at 8 mW/K.
 For TSSOP16 package: above 60 °C the value of P_{tot} derates linearly at 5.5 mW/K.
 For DHVQFN16 package: above 60 °C the value of P_{tot} derates linearly at 4.5 mW/K.

Table 6.Typical static characteristics at $T_{amb} = 25 \ ^{\circ}C[\underline{1}][\underline{2}] \dots continued$

[1] V_{CCO} is the supply voltage associated with the output port.

[2] V_{CCI} is the supply voltage associated with the data input port.

[3] The bus hold circuit can sink at least the minimum low sustaining current at V_{IL} max. I_{BHL} should be measured after lowering V_I to GND and then raising it to V_{IL} max.

[4] The bus hold circuit can source at least the minimum high sustaining current at V_{IH} min. I_{BHH} should be measured after raising V_I to V_{CC} and then lowering it to V_{IH} min.

- [5] An external driver must source at least I_{BHLO} to switch this node from LOW to HIGH.
- [6] An external driver must sink at least I_{BHHO} to switch this node from HIGH to LOW.
- [7] For I/O ports, the parameter I_{OZ} includes the input leakage current.

Table 7. Static characteristics ...continued

At recommended operating conditions; voltages are referenced to GND (ground = 0 V)

[1] V_{CCO} is the supply voltage associated with the output port.

[2] V_{CCI} is the supply voltage associated with the data input port.

[3] The bus hold circuit can sink at least the minimum low sustaining current at V_{IL} max. I_{BHL} should be measured after lowering V_I to GND and then raising it to V_{IL} max.

- [4] The bus hold circuit can source at least the minimum high sustaining current at V_{IH} min. I_{BHH} should be measured after raising V_I to V_{CC} and then lowering it to V_{IH} min.
- [5] An external driver must source at least I_{BHLO} to switch this node from LOW to HIGH.
- [6] An external driver must sink at least I_{BHHO} to switch this node from HIGH to LOW.

[7] For I/O ports, the parameter I_{OZ} includes the input leakage current.

Table 8. Typical total supply current (I_{CC(A)} + I_{CC(B)})

V _{CC(A)}	V _{CC(B)}							Unit

10. Dynamic characteristics

Table 9. Typical power dissipation capacitance at $V_{CC(A)} = V_{CC(B)}$ and $T_{amb} = 25 \degree C \frac{[1][2]}{2}$

Voltages are referenced to GND (ground = 0 V). Symbol Parameter Conditions $V_{CC(A)} = V_{CC(B)}$ Unit 0.8 V 1.2 V 1.5 V 1.8 V 2.5 V 3.3 V 0.2 0.2 0.2 C_{PD} power dissipation A port: (direction nAn to 0.2 0.3 0.4 pF nBn); output enabled capacitance A port: (direction nAn to 0.2 0.2 0.2 0.2 0.3 0.4 pF nBn); output disabled A port: (direction nBn to 9.5 9.7 9.8 9.9 10.7 11.9 рF nAn); output enabled A port: (direction nBn to 0.6 0.6 0.6 0.7 0.7 0.6 pF nAn); output disabled B port: (direction nAn to 9.8 9.9 10.7 11.9 pF 9.5 9.7 nBn); output enabled B port: (direction nAn to 0.6 0.6 0.6 0.6 0.7 0.7 pF nBn); output disabled B port: (direction nBn to 0.2 0.2 0.2 0.2 0.3 0.4 pF nAn); output enabled B port: (direction nBn to 0.2 0.2 0.2 0.2 0.3 0.4 pF nAn); output disabled

[1] C_{PD} is used to determine the dynamic power dissipation (P_D in μ W).

 $P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \Sigma (C_L \times V_{CC}^2 \times f_o)$ where:

 $f_i = input frequency in MHz;$

 $f_o = output frequency in MHz;$

C_L = load capacitance in pF;

 V_{CC} = supply voltage in V;

N = number of inputs switching;

 $\Sigma(C_L \times V_{CC}{}^2 \times f_o)$ = sum of the outputs.

[2] $f_i = 10 \text{ MHz}$; $V_I = \text{GND}$ to V_{CC} ; $t_r = t_f = 1 \text{ ns}$; $C_L = 0 \text{ pF}$; $R_L = \infty \Omega$.

16.1 Data sheet status

Document status ^{[1][2]}	Product status ^[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

16.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

16.3 Disclaimers

General — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.

Terms and conditions of sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by NXP Semiconductors. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from national authorities.
