

# MNR Varistors

## Metal Oxide Type

Varistors are voltage-dependent, non-linear resistors which have symmetrical, sharp, breakdown characteristics similar to back-to-back Zener diodes. They are designed for transient suppression in electrical circuits. Transients can result from the sudden release of previously stored energy (EMP), or from extraneous sources beyond the control of the circuit designer, such as lightning surges.

### Features

- High transient current capability – up to 6500A.
- Fast response time – less than 35ns.
- Excellent voltage clamping characteristics..
- Very low temperature coefficient.
- Low standby current.
- Compact and light weight.
- High energy capability.
- High voltage - dependent index (N)
- Very low leakage current.
- Low capacitance.
- Low overshoot characteristics.
- Low leakage factor.
- Epoxy coating for maximum protection from heat, humidity, shock, and vibration.
- UL recognized, CSA certified.
